

## **NoblePeak Vision Corp. Offers Patented Technology to Integrate Germanium Photodetectors With Silicon Circuits at the November 5, 2010 Sealed Bid Sale**

WELLESLEY HILLS, Mass., Oct. 4 /PRNewswire/ -- Joseph F. Finn, Jr., C.P.A. ("Finn"), announced today that he is offering for sale the patented technology to integrate germanium photodetectors with silicon circuits at the November 5, 2010 sealed bid sale of NoblePeak Vision Corp. assets.

NoblePeak has developed and implemented a process flow that incorporates single crystal germanium photodetectors with CMOS circuits. Germanium detectors allow the detection of a much wider spectrum of light than silicon imagers. By forming an array of such detectors and combining them with on-chip imaging circuitry, visible-to-short wave infrared imagers have been fabricated at high volume with silicon economics.

Germanium is a suitable material for photodetectors. Germanium is invariably used as a relatively dilute SiGe alloy (<30% Ge) in very thin layers. NoblePeak developed a special growth technique which circumnavigates the difficulties of growing thick pure layers of germanium.

The intellectual property, fixed assets and inventory will be sold by a sealed bid sale at 12:00 noon on November 5, 2010.

Persons interested in bidding must sign a Confidentiality Disclosure Agreement ("CDA") obtained from Finn's Office – [jffinnjr@finnwarnkegayton.com](mailto:jffinnjr@finnwarnkegayton.com) or 781-237-8840. They will then receive a bid package.
