

## **NoblePeak Vision Corp. Offers Patented Technology to Integrate Germanium Photodetectors with Silicon Circuits at the November 5, 2010 Sealed Bid Sale**

WELLESLEY HILLS, Mass., Oct. 12 /PRNewswire/ -- Joseph F. Finn, Jr., C.P.A. ("Finn"), announced today that he is offering for sale the patented technology to integrate germanium photodetectors with silicon circuits at the November 5, 2010 sealed bid sale of NoblePeak Vision Corp. assets.

NoblePeak has developed and implemented a process flow that incorporates single crystal germanium photodetectors with CMOS circuits. By taking advantage of germanium's sensitivity to longer wavelengths, TriWave reaches past the near-infrared spectrum into the SWIR. These wavelengths are beyond what silicon-based low light CMOS and CCD cameras can see. Subsequently, illumination from the Earth's natural Night Glow is now visible and can be utilized to build high-resolution, high performance day/night cameras at commercial prices.

The intellectual property, fixed assets and inventory will be sold by a sealed bid sale at 12:00 noon on November 5, 2010.

Persons interested in bidding must sign a Confidentiality Disclosure Agreement ("CDA") obtained from Finn's Office – [jffinnjr@finnwarnkegayton.com](mailto:jffinnjr@finnwarnkegayton.com) or 781-237-8840. They will then receive a bid package.

About Joseph F. Finn, Jr., C.P.A.
